

TOWARDS A SUSTAINABLE AND CIRCULAR USE OF YOUR IT HARDWARE

RECYCLE

E-waste is a growing problem. Econocom works with certified IT partners in the field of recycling.

REFURBISHMENT AND SECOND LIFE

Used and obsolete equipment can be restored to its original specifications.

Econocom buys your PCs, laptops, smartphones and tablets. Every year, Econocom buys back 30,000 used desktops, laptops, smartphones and tablets in B2B.

Econocom takes care of the transport and data erasure and seeks to give devices a responsible second life.

REPAIR

Thanks to maintenance contracts, the life of the first use can be extended.

Econocom offers repair services that go further:

- Extended warranties for desktops, laptops, tablets, smartphones
 - > On site repair
 - > Collection and return + optional exchange
 - > Drop off at the office
- Third party maintenance for your servers and storage systems

DON'T THROW, REUSE!

E-waste reduction is a real challenge. A new purchase may not be absolutely necessary. Econocom sells used hardware for the professional B2B market.

Did you know that the average CO₂ for a smartphone is 37 kg? And that a laptop produces between 400 and 600 kg of CO₂ equivalent?

REDUCE

Efficient manufacturing and consumption is an essential component of the sustainable IT chain.

Econocom works with an ecosystem of renowned brands. These manufacturers are committed to the design and production of modular hardware. They focus on reducing energy consumption and packaging, and on eco-friendly transport.

USAGE AND AS-A-SERVICE

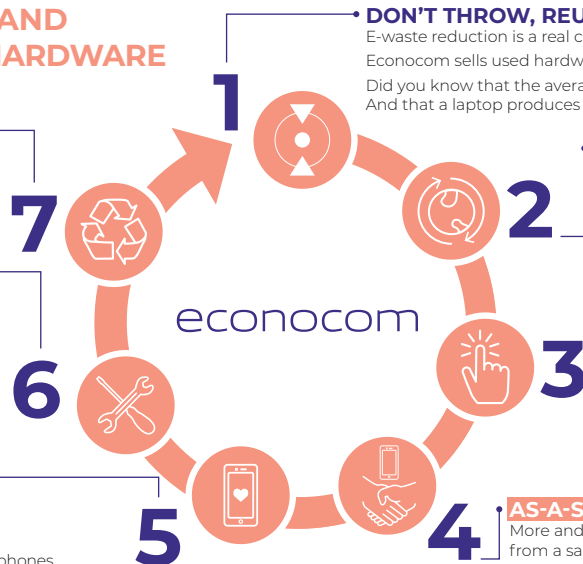

The market is changing: from ownership to usage, from product to service.

Econocom supports organisations in this transition to as-a-service, an all-in-one solution for just a monthly fee, including services.

AS-A-SERVICE PARTNERSHIPS

More and more organisations are moving from a sales model to as-a-service.

As an integrator, Econocom helps organisations with their administrative, financial and logistical processes.
